

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-15 (Canceled).

Claim 16 (Currently Amended): An information storage medium for use with at least one of a data recording device and a playback device, the information storage medium comprising:

an object recording area for recording one or more still picture video objects of a still picture audio/video file; and

a control information recording area for recording a real time recording video manager, wherein

said still picture audio/video file comprises a still picture video object group,

said real time recording video manager comprises one of a still picture audio/video file information table, original program chain information, and a user defined program chain information table,

said still picture audio/video file information table comprises still picture audio/video file information,

said still picture audio/video file information comprises still picture video object group information for said still picture video object group,

said still picture video object group information comprises a still picture video object entry which contains the necessary information to access each of said still picture video objects in a corresponding still picture video object group,

said user defined program chain information table comprises user defined program chain information,

said original program chain information or said user defined program chain information can comprise still picture cell information,

said still picture cell information comprises still picture cell general information,

said still picture cell general information comprises a start still picture video object entry number referring to specified number information of one of the still picture video objects included in the still picture video object group,

said still picture cell general information comprises an end still picture video object entry number referring to specified number information of one of the still picture video objects included in the still picture video object group,

said still picture video object group information comprises a still picture video object group general information, and

said still picture video object group general information comprises a start address of a corresponding still picture video object group in the still picture audio/video file,

wherein the data recording device and/or the playback device access the real time recording video manager of the control information recording area to reproduce the still picture video object group.

Claim 17 (Previously Presented): An information recording method for recording information on an information recording medium which includes,

areas for recording a still picture audio/video file and a real time recording video manager, wherein

said still picture audio/video file comprises a still picture video object group,

said real time recording video manager comprises one of a still picture audio/video file information table, original program chain information, and a user defined program chain information table,

said still picture audio/video file information table comprises still picture audio/video file information,

said still picture audio/video file information comprises still picture video object group information for said still picture video object group,

said still picture video object group information comprises a still picture video object entry which contains the necessary information to access each still picture video object in a corresponding still picture video object group,

said user defined program chain information table comprises user defined program chain information,

said original program chain information or said user defined program chain information can comprise still picture cell information,

said still picture cell information comprises still picture cell general information,

said still picture cell general information comprises a start still picture video object entry number referring to specified number information of one of the still picture video objects included in the still picture video object group,

said still picture cell general information comprises an end still picture video object entry number referring to specified number information of one of the still picture video objects included in the still picture video object group,

said still picture video object group information comprises a still picture video object group general information, and

said still picture video object group general information comprises a start address of a corresponding still picture video object group in the still picture audio/video file,

the information recording method comprising:

recording one or more still picture video objects of the still picture audio/video file in an object recording area of said areas; and

recording the real time recording video manager in a control information recording area of said areas.

Claim 18 (Previously Presented): An information reproducing method for reproducing information on an information recording medium which includes,

a still picture audio/video file for one or more still picture video objects and a real time recording video manager, wherein

said still picture audio/video file comprises a still picture video object group,

said real time recording video manager comprises one of a still picture audio/video file information table, original program chain information, and a user defined program chain information table,

said still picture audio/video file information table comprises still picture audio/video file information,

said still picture audio/video file information comprises still picture video object group information for said still picture video object group,

said still picture video object group information comprises a still picture video object entry which contains the necessary information to access each of said still picture video objects in a corresponding still picture video object group,

said user defined program chain information table comprises user defined program chain information,

said original program chain information or said user defined program chain information can comprise still picture cell information,

said still picture cell information comprises still picture cell general information,

said still picture cell general information comprises a start still picture video object entry number referring to specified number information of one of the still picture video objects included in the still picture video object group,

said still picture cell general information comprises an end still picture video object entry number referring to specified number information of one of the still picture video objects included in the still picture video object group,

said still picture video object group information comprises a still picture video object group general information, and

said still picture video object group general information comprises a start address of a corresponding still picture video object group in the still picture audio/video file,

the information reproducing method comprising:

reproducing one of the still picture video objects based on the real time recording video manager, wherein the one of the still picture video objects is accessed according to the start address of a corresponding still picture video object group.

Claim 19 (Previously Presented): An information reproducing apparatus for reproducing information on an information recording medium which includes,

a still picture audio/video file for one or more still picture video objects and a real time recording video manager, wherein

said still picture audio/video file comprises a still picture video object group,

said real time recording video manager comprises one of a still picture audio/video file information table, original program chain information, and a user defined program chain information table,

said still picture audio/video file information table comprises still picture audio/video file information,

said still picture audio/video file information comprises still picture video object group information for said still picture video object group,

said still picture video object group information comprises a still picture video object entry which contains the necessary information to access each of said still picture video objects in a corresponding still picture video object group,

said user defined program chain information table comprises user defined program chain information,

said original program chain information or said user defined program chain information can comprise still picture cell information,

said still picture cell information comprises still picture cell general information,

said still picture cell general information comprises a start still picture video object entry number referring to specified number information of one of the still picture video objects included in the still picture video object group,

said still picture cell general information comprises an end still picture video object entry number referring to specified number information of one of the still picture video objects included in the still picture video object group,

said still picture video object group information comprises a still picture video object group general information, and

said still picture video object group general information comprises a start address of a corresponding still picture video object group in the still picture audio/video file,

the information reproducing apparatus comprising:

a reproducer configured to reproduce one of the still picture video objects based on the real time recording video manager, wherein the one of the still picture video objects is accessed according to the start address of a corresponding still picture video object group.
